

Learn the fastest growing  
web application framework  
on the web today!

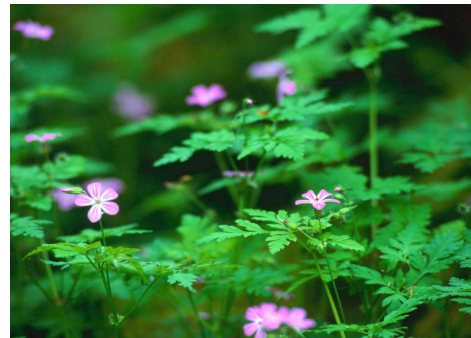

# Intro to Ruby on Rails

With Kevin English  
Sunday, October 2, 2011

A full day, hands-on training course for only \$135

**Ruby on Rails** is the most fun way to build interactive web applications. **Ruby** is a terse, yet expressive, scripting language designed for programmer happiness. Rails is the productive and feature-rich web application framework that is powering some of the world's most popular websites, like Twitter, Hulu and Basecamp. Learn both Ruby and Rails and how to use them to build, and deploy, real life data driven websites. This course teaches you just enough Ruby and a whole lot of Rails so that at the end of the day you can build web applications with one the most popular open source frameworks available.

**Kevin English** has been developing web applications since 1999. He has been using Ruby on Rails since 2007. Kevin is currently an independent software consultant in Honolulu. If you have question about the course, feel free to call Kevin directly at 808-271-5125 or email [kenglish@gmail.com](mailto:kenglish@gmail.com).
